

**N.B****Time: 3 Hours****Total Marks: 80**

- (1) Question no. 1 is compulsory.
- (2) Attempt any 3 from the remaining questions.
- (3) Assume suitable data if necessary.
- (4) Figures to right indicate full marks.

6

a) Attempt the Multiple Choice Questions

```
i) #include<stdio.h>
int main()
{
    int a=0;
    a=a++ + a++ - a++ + ++a;
    printf("%d\n", a);
    return 0;
}
```

The output of above program is

- (a) 2      (b) 0      (c) 3      (d) Error

ii) Which of the following operator can be used to access value at address stored in a pointer variable?

- (a) \*      (b) @      (c) &      (d) &&

iii) In C Programming which of the operator have the highest precedence

- (a) Relational      (b) Arithmetic      (c) Bitwise      (d) Logical

iv) Which of the following are themselves a collection of different data types?

- (a) string      (b) 2D Arrays      (c) structures      (d) char

v) If x and b are the float variable what is the value of x when x=sizeof(b).

- (a) 2      (b) 3      (c) 4      (d) Null

vi) The default value of static storage class variable is

- (a) Zero      (b) Garbage      (c) One      (d) None of above

4

b) Find the output of following

```
i) #include <stdio.h>
int main()
{
    int a=1;
    do{
        a++;
        ++a;
    }while(a++>25);

    printf("%d\n",a);

    return 0;
}
```

```
ii) #include <stdio.h>
int main()
{
    int x;
    x = 10;
    if(x > 10)
        x -= 10;
    else if(x >= 0)
        x += 00;
    else if(x)
        x += 10;
    else
        x -= 10;

    printf("%d\n",x);
    return 0;
}
```

- c) Convert the following
  - i) 153 from base 10 to Hexadecimal
  - ii) 1100 1101 1001 1011 from base 2 to decimal
  - iii) 143 from base 8 to decimal
- d) Differentiate between Structure and Union

- Q.2
- a) What is recursion? Write a program using recursion to calculate the value of  $2^n$ .
  - b) Write a function to reverse a 3 digit number
  - c) Write a program to display following pattern

```
0
0 1
0 1 0
0 1 0 1
0 1 0 1 0
```

- Q.3
- a) Write a program to find the frequency of digits in a set of numbers and remove duplicates from an array. For ex. array A={1,2,3,4,2,5,2} frequency of 2 is 3 and resultant array A={1,2,3,4,5}.
  - b) Explain the concept of nested structure? Declare a structure to enter employee information like name, id, salary, date of joining. Use nested structure to get the details of an employee. Write a program to read 10 records and display them.

- Q.4
- a) Explain strcat() & strcpy() with example. Also write a program to check whether a string is palindrome or not without using inbuilt string functions.
  - b) Differentiate between call by value and call by reference. Write a program to calculate Factorial of a number using call by reference.

- a) What is file? Explain the functions available for Reading & Writing data of files?  
Write a program to take student information from user and store it in file.
- b) Write a program to calculate sum of diagonal elements of a matrix.

For ex.

1 2 3

5 9 8

1 4 7

Calculate the sum of diagonal elements = 3+9+1 = 13

- a) Explain storage classes with example. 10
- b) Write a program to find greatest number among three entered number using ternary operator 4
- c) Write a program to calculate the sum of series 6
- $$x - x/2! + x/3! - x/4! \dots x/n!$$
